(54) Title: A MANUAL RAZOR WITH ROTATABLE BLADE HEAD

(57) Abstract: A manual razor comprising an elongate handle and a disposable razor blade head removeably located substantially at one end of said handle. The razor blade head includes a rotatable head body and a plurality of elongate blades mounted from said head body. Both together are rotational about an axis parallel to the elongate direction of the blades. The blades can be sequentially presented to present at least one of said blades in an operative manner for shaving. An adjuster is provided that is operatively engaged with said head body and includes an input actuator located by said handle body to allow a digit of a user to actuate the rotation of the head body and plurality of elongate blades.
