(54) Title: SYSTEMS AND METHODS FOR ELECTRONIC INFORMATION DISTRIBUTION

(57) Abstract: Systems and methods secure electronic information distribution are described. In one described system, a sender creates a package, specifying the attributes, files, and recipients associated with the package. The package is received at a package distribution server, which stores the package and transmits a notification to the recipient of the availability of the package. Subsequently, the recipient issues a request to the package distribution server for the package, and the package distribution server receives the request and transfers the file to the recipient. The package distribution server may track the transfer, cause charges to be accrued against the seller, and perform other functions related to the information transfer.
