(54) Title: SUSTAINABLE CANDLES AND METHODS

FIG. 1A

(57) Abstract: Disclosed are apparatuses and corresponding and/or associated methodologies for sustainable (refillable) candles. This technology relates to refurbishing a used candle jar or container, so that its depleted wick and/or wax components are exchanged for replacement wick and wax components, so that the candle jar can be reused instead of being thrown out. An end of the wick is associated with an anchor or insert (such as a centering or positioning heat-resistant disc, removable silicone (or other materials) tray, or other). The replacement wick is physically held straight up and held in place by replacement scented wax beads, pellets, or the like poured into the jar. Burning of the wick melts and consumes the wax as it goes. After the wax and wick are exhausted, the insert and any remaining wax and other debris are removed from the jar in preparation for another refurbishment cycle. The insert is cleaned as needed for reuse with a new replacement wick.
