[Summary of Invention]

[Technical Problem]

[0005]

The present ~~invention~~ disclosure seeks to provide~~s~~ a real-time monitoring of the package of shuffled game cards in casinos and enable~~s~~ the casino to stop a game immediately when something unexpected happens by administrating the whole package of shuffled game cards in casinos. This administrating is important because he or she may know the sequence of the shuffled playing cards on the table once it had been lost in the casino.

[0006]

The present ~~invention has been made in view of the above problem, and aims~~disclosure also seeks to provide a package of shuffled game cards monitoring system with which it is possible to allow a casino to stop any suspicious package of shuffled game cards in the casino, by administrating the whole package of shuffled game cards in casinos.

When operating people in casinos distribute the packages of playing cards to game tables for plays, any loss of package or an exchange of packages should not occur. For example, if some of cards or whole package of cards in which the sequence of these cards are preliminary read or exchanged by someone during a delivery of packages to a game table, he or she may win the games at the table to which the exchanged or read package delivered.

[Solution to Problem]

[0007]

An aspect of the present invention provides a management system that manages casino supplies used in a casino, wherein each of the casino supplies belongs to one of multiple groups each of which is grouped by attribute of the casino supply, the casino supplies are received from outside the casino at the backyard of the casino and then used at gaming tables in the casino, each of the casino supplies holds information to identify which of the multiple groups the casino supply belongs to, the information including a unique ID that uniquely identifies the casino supply, the management system comprising: a database configured to store the unique ID of the casino supply in association with the group to which the casino supply belongs; a reading system installed at each of multiple locations in the casino, including the backyard and the gaming tables, and configured to read at least part of the information from the casino supply; a management controller configured to register the casino supply whose information is read by the reading system in the backyard as an available casino supply in the database, wherein the reading system in the backyard reads the at least a part of the information of a plurality of the casino supplies to be handled as a single unit at the same time, and the database stores the at least a part of the information of the plurality of the casino supplies read by the reading system in the backyard, or the at least a part of the information of the plurality of the casino supplies contained in data provided by a supplier of the casino supplies.

[0007a]

Another aspect of the present invention provides a management system for managing casino supplies used in a casino, wherein each of the casino supplies belongs to one of multiple groups each of which is grouped by attribute of the casino supply, the casino supplies are received from outside the casino at the backyard of the casino and then used at gaming tables in the casino, each of the casino supplies holds information to identify which of the multiple groups the casino supply belongs to, the information including a unique ID that uniquely identifies the casino supply, the management system comprising: a reading system installed at each of multiple gaming tables and configured to read at least a part of the information from the casino supply when the casino supply from the backyard is brought to the gaming table, a controller configured to identify the group to which the casino supply belongs based on the at least a part of the information read by the reading system.

[0007b]

~~To solve the above conventional problems, the present invention provides~~There is also disclosed a system for administrating a package of shuffled playing cards, wherein

a predetermined number of decks of game cards are shuffled in a random order and individually packaged as one package, an unique ID code is attached to the package of each unique shuffled game cards

the system having

one or more ID code reader(s) for reading all of ID codes of the packages which have been brought into a pit for a game table,

an administrating controller for monitoring each ID code of all existing packages of shuffled game cards at the pit with obtaining each ID codes of all existing packages of shuffled game cards at the pit by the ID code reader(s),

the ID code reader(s) is also disposed at the game table for reading the ID code of the packages at the game table to identify the package which will be the next use for a card dealing shoe,

wherein,

the ID codes of the packages for the next use is examined whether it is the one properly arrived on the game table or the one arrived at proper timing or period of time by the administrating controller.

[0008]

~~To solve the above conventional problems, the present invention provides~~There is also disclosed a method for administrating a package of shuffled playing cards,

wherein

a predetermined number of decks of game cards are shuffled in a random order and individually packaged as one package, an unique ID code is attached to the package of each unique shuffled game cards

and

the packages of shuffled game cards are carried from a backyard to pits for game tables and game tables,

the method having,

a registering step for registering all of ID codes of the packages which have been brought into a back yard in a data base,

an administrating step for reading all of the ID codes of packages which have been brought into a pit and monitoring each ID code of all existing packages of shuffled game cards at the pit by obtaining each ID codes of all existing packages of shuffled game cards at the pit by ID code reader(s),

wherein,

in the administrating step at the pit all of ID codes of the packages is examined whether it is the one preliminarily brought into the back yard and having been registered in the data base or not.

[0009]

The method for administrating a package of shuffled game cards according to the present disclosure~~this invention~~, the registered ID codes of the packages in the data base may be deleted or acknowledged as after having used when the ID code of the package is read by an ID code reader at the game table. The ID codes of the packages read for the next use may be examined by the administrating controller whether it is the one properly arrived on the game table or the one arrived at proper timing or period of time that may be properly arrived on the game table or the one arrived at proper timing or period of time by judging at least one of the followings;

1) whether it was carried through predetermined delivery rout,

2) whether it was missing one,

3) whether it has not been registered,

4) whether it has been unused in the pit more than predetermined period,

5) whether it was carried from unexpected pit or without passing any pit,

6) whether it had been used at any of game tables in the past.

[0010]

The method for administrating a package of shuffled game cards according to the present disclosure~~this invention~~, the administrating step further may have a step for administrating whether or not all of registered ID codes of the packages in the data base have been deleted or acknowledged as after having used during certain period of time. A pallet ID or a carton ID may be used for registering ID codes of the packages which have been brought into the back yard. The administrating step further may have a step for administrating whether or not there is any package which has not been used at the game tables during certain period of time.

[0011]

A keeping box for containing plurality of packages of shuffled game cards for the method for administrating a package of shuffled game cards according to ~~our invention~~the present disclosure may have reader(s) for reading the ID codes of packages of shuffled game cards in the keeping box, a communication means for sending information obtained by the reader to outside the keeping box and a lock means to prevent taking off the package from the keeping box.

[Brief Description of Drawings]

[0014]

[Figure 1] Fig. 1 is a perspective view of a package and an unpackaged shuffled playing cards to be used in a card dealing shoe of the system for administrating a package of shuffled playing cards according to the embodiment of the present invention.

[Figure 2] Fig. 2 is a diagram schematically showing the entirety of a system for administrating a package of shuffled playing cards according to an embodiment of the present invention.
