

ABSTRACT OF THE DISCLOSURE

FORM SET-UP AND METHOD FOR STRIPPING UPRIGHT FORM

PANELS OF THE FORM SET-UP FROM A CONCRETE UNIT

A form set-up and a method for stripping upright
5 form panels 2 of the form set-up from a concrete unit
are disclosed. The form set-up defines a pouring space
into which concrete is poured and cast so as to form a
concrete unit. The form set-up includes at least two
form panels 2. Each panel 2 has a contact surface 20
10 in contact with a vertical surface of the concrete
unit, a mounting surface opposed to the contact surface
20, and a reinforcing beam member 21,21A,22 secured to
the mounting surface. The beam members 21,21A,22 of
the two panels 2 are aligned with each other. An
15 interconnecting member 4 is interposed removably
between the two panels 2 and has a contact surface 40
which is flush with the contact surfaces 20 of the two
panels 2 and which is in contact with the vertical
surface of the concrete unit. A driving assembly 6,7
20 is interposed between the beam members 21,21A,22 and is
activable to move the beam members 21,21A,22 toward
each other so as to move the two panels 2 toward each
other in order to separate the two panels 2 from the
concrete unit when the interconnecting member 4 is
25 removed from the panels 2.
