

MESSAGE MACHINE

ABSTRACT

Provided is a massage machine capable of making the whole of the machine simple and compact, easily switching massage positions, and also giving various massage effects to users.

The massage machine (1) of the present invention includes: a massage mechanism (30) that gives a massage action to a treatment region; a movement drive part (13) that moves the massage mechanism (30) along a predetermined track (23) from one side to the other side of the track (23); and a switching mechanism (26) that switches the moving direction of the massage mechanism (30) to multiple directions by changing the bending level of the track (23).
