ABSTRACT
PALM BASED EXFOLIATOR

The present invention relates to an alternative palm based exfoliator which is produced from renewable and environmentally friendly ingredients. More particularly, the palm based exfoliator comprises mixture of palm oil, palm derivatives and palm waves, emulsifiers and additives. The present invention also disclosed a method to produce the exfoliator comprising the steps of mixing, melting and stirring continuously the palm mixtures; adding the emulsifier into the mixture and stirring until homogenous solution formed; adding the water containing emulsifiers to the solution; and cooling the solution containing emulsifier to room temperature to obtain slurry containing exfoliators.
