ABSTRACT

A virtual character display method and apparatus, and a device, a medium and a program product, which relate to the field of virtual environments. The method comprises: displaying a virtual character, a first character part on the virtual character comprising a first clothes component and a first body component which are associated (302); in response to a clothes component replacement operation, acquiring a second clothes component, the first clothes component and the second clothes component corresponding to the same clothes part (304); and displaying the virtual character in an updated manner, the first character part on the virtual character comprising the second clothes component and a second body component which are associated (306), wherein the length of the first clothes component is different from that of the second clothes component, the length of the first body component is different from that of the second body component, the body length of the first character part is kept unchanged or a change value is less than a threshold value. The phenomenon of model penetration can be reduced..
