

INFORMATION PROCESSING DEVICE, CONTENT REQUESTING METHOD,
AND COMPUTER PROGRAM

ABSTRACT

5

[Object] To provide an information processing device in which maintenance is enabled by avoiding an increase in an amount of the meta information when a device is remotely controlled by a client using the ABS technique.

[Solution] Provided is an information processing device including: a storage
10 unit configured to store a predetermined definition for adding a parameter to access information for accessing each of a plurality of subsegments constituting each piece of encoded data obtained by encoding same content at a different bit rate, or for accessing every element to be acquired through a request to a server described in an MPD; and a communication unit configured to access an address defined in the
15 access information by designating a parameter based on the predetermined definition stored in the storage unit. The address defined in the access information is an address for controlling a device which images the content.
