

**METHOD OF CONTROLLING CONVEYOR AND ELECTRONIC
APPARATUS THEREFOR**

ABSTRACT

5 Provided is a method of controlling a conveyor for item transportation and an
electronic apparatus therefor, the method including acquiring information associated with
a plurality of destinations, identifying a weight for each of the plurality of destinations
based on the acquired information, determining, in response to an item being identified,
a destination among the plurality of destinations based on the identified weight, wherein
10 the item is placed in the determined destination, and controlling the conveyor to transport
the item to the determined destination.
