

MASSAGING APPARATUS

ABSTRACT

Massaging apparatus operable by user-owned mobile electronic information equipment is provided.

The massaging apparatus (1), which massages message target areas of user's body, is operable by user-owned mobile electronic information equipment (10). For example, the massaging apparatus (1) has a massaging mechanism for massaging the message target areas. The mobile electronic information equipment (10) is designed for operation of the massaging mechanism. The mobile electronic information equipment (10) owned by a user (M) displays, on its display section (11), menu items for operation of the main body of the massaging apparatus (1) that massages the message target areas of the user (M) and/or menu items for operation of an additional mechanism provided in the main body of the massaging apparatus (1). The main body of the massaging apparatus (1) is equipped with an operation section (30) to permit manipulation of the display section (11) of the mobile electronic information equipment (10) from remote locations.
