

ABSTRACT

Embodiments of the present disclosure disclose a certificate recognition method and apparatus, an electronic device, and a computer-readable storage medium. The method includes: performing key point detection on a certificate image to obtain information of multiple key points of a certificate included in the certificate image, where the multiple key points include at least two boundary defining points of a first text area in the certificate, and the first text area includes multiple text lines corresponding to a first character type; and determining a text recognition result of the certificate on the basis of the information of the multiple key points.
