(54) Title: MEASURING DEVICE AND CONTAINER

FIG. 2

(57) Abstract: A measuring device for dispensing granulated powder. The measuring device (50) includes a bucket (54), handle (66) and a tapered tip (52). The bucket has a substantially circular top cross-sectional area and outside diameter, with a depth of from about 75% to about 250% of the outside diameter. The bucket includes a handle side oppositely facing a distal side. The handle is formed on the handle side of the bucket, and the tapered tip is formed on the distal side of the bucket. Some embodiments include varying volumes of the bucket, from about 5 cubic centimeters to about 30 cubic centimeters. The handle can include a surface indentation. The measuring device may be combined with an associated container (10), such that the measuring device is used to dispense granulated powder from the container.
