DIAGNOSIS AND THERAPY OF CANCER INVOLVING CANCER STEM CELLS

ABSTRACT

The present invention provides methods for diagnosis or treatment of cancer diseases involving cancer stem cells comprising targeting CLDN6. In particular, the present invention provides a method of determining cancer stem cells comprising detecting cells expressing CLDN6. Furthermore, the present invention provides a method of treating or preventing cancer comprising inhibiting and/or eliminating cancer stem cells by administering an antibody having the ability of binding to CLDN6 to a cancer patient.
