

AN ELECTROMAGNETIC MOTOR**ABSTRACT**

5

An electromagnetic motor 100 comprising a stator 104, a rotor 102 configured to rotate about the stator 104, and a Tetrahedral Amorphous Carbon (TAC) layer 120 on a least one bearing surface 122,124,126,128 between the stator 104 and the rotor 102.
