PARKING CONTROL SYSTEM, PARKING CONTROL METHOD, AND PARKING CONTROL PROGRAM

ABSTRACT

Provided are a parking control system, a parking control method, and a parking control program that can improve user convenience of the parking facility. The parking control system performs a process to move a vehicle between a berth 1 where at least any one of getting in and getting out of the vehicle is performed and a parking area 7 where a vehicle is parked, and the parking control system includes: a buffer control unit configured to perform a process to move a vehicle between the berth 1 and a buffer section 20 capable of having vehicles arranged in the parking area 7; and a parking control unit configured to perform a process to move a vehicle between the buffer section 20 and a parking section 30 capable of having vehicles arranged in the parking area 7 including a region farther than the buffer section 20 from the berth 1.
