

5 "SELECTIVE BIFUNCTIONAL MULTIMETALLIC
 HYDROCARBON CONVERSION
 CATALYTIC COMPOSITE AND PROCESS FOR THE USE THEREOF"

ABSTRACT

10 A novel catalyst and the use thereof in a hydrocarbon conversion process is disclosed. The catalyst comprises a refractory inorganic oxide, platinum-group metal, Group IVA(IUPAC 14) metal, and europium in a specified ratio. Utilization of this catalyst in the conversion of hydrocarbons, especially in reforming, results in significantly improved selectivity to the desired gasoline or aromatics product.
