

## ABSTRACT

This application provides a channel measurement method and apparatus, to measure a joint channel. The method includes: receiving measurement configuration information from a network device, and performing joint channel measurement based on the measurement configuration  
5 information, where the measurement configuration information is used to configure one or more groups of measurement resources, each group of measurement resources includes a plurality of measurement resources, and the group of measurement resources is used to perform joint channel measurement once. In embodiments of this application, the network device configures a plurality of measurement resources for the joint channel, and different beam directions may be configured  
10 for different measurement resources, so that channel measurement on the joint channel can be implemented.
