(54) **Title:** A CLOUD SUFFIX PROXY AND METHODS THEREOF

(57) **Abstract:** A method and system for modifying network addresses of at least one cloud application. The method comprises receiving a webpage sent to a client device from the at least one cloud application, wherein a webpage designates at least one script loaded to the client device during runtime; injecting a piece of code to the webpage; receiving, by the injected piece of code, an attempt to load each of the at least one script; modifying the at least one script by suffixing each network address designated in the at least one script with a predefined network address; and sending the modified at least one script to the client device, wherein runtime execution of the modified at least one script on the client device causes redirection of future requests from the client device to the cloud application to the suffixed network address.

FIG. 2

SM, TR), OAPI (BF, BJ, CF, CG, CI, CM, GA, GN, GQ, —
GW, KM, ML, MR, NE, SN, TD, TG).
