

SOUND SEPARATING METHOD AND APPARATUS, AND ELECTRONIC DEVICE

ABSTRACT

A sound separating method and apparatus, and an electronic device. The method comprises: obtaining input sound spectra, the input sound spectra comprising sound spectra corresponding to multiple sound sources (100); performing spectrum separating processing on the input sound spectra, and separating a predicated sound spectrum from the input sound spectra (102); removing the predicated sound spectrum from the input sound spectra to obtain updated input sound spectra (104); and by means of the updated input sound spectra, continuing to obtain the next separated predicated sound spectrum till the updated input sound spectra comprise no sound spectrum, and finishing iteration (106).
