(54) **Title**: TETHERED DATA CALL WITH CONTINUOUS APPLICATION

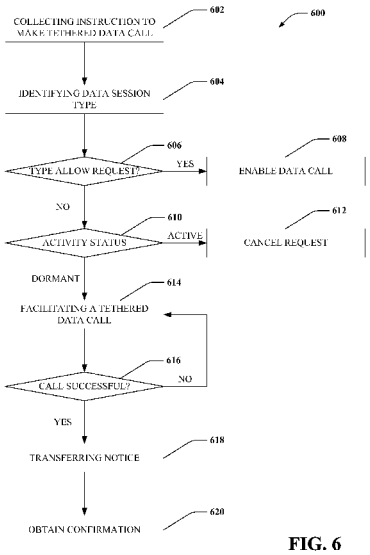

FIG. 6

(57) **Abstract**: Commonly, when a mobile device tethers to a computer, one Internet Protocol address is provided. When an embedded application runs continuously, such as with a Internet Protocol Multimedia Subsystem application, tethered applications can be prohibited from operating. If the continuous application is not active, then the continuous application can be disconnected and thus the tethered application can function.
