(54) Title: A SYSTEM AND A METHOD FOR MODIFICATION OF A DEVICE AND A DEVICE SUITABLE FOR MODIFICATION

(57) Abstract: A system and a method for modification of an manually operated injection device. The injection device comprises a housing (1-3) designed or suitable for manual gripping, a container for a preparation attached to (6) or enclosed in the housing, an outlet (4) for the preparation exposed with respect to the housing, optionally a cap or guard (8) arranged for removable attachment over the outlet and a mechanism arranged for moving the preparation at least from the container through the outlet. The system comprises a set of at least two elements (11, 11') having different properties in at least one respect. The elements (11, 11') are designed for mechanical attachment to one and the same area part (3) of the housing, one at the time. The method includes the steps of providing at least two elements (11, 11') having different properties in at least one respect, the elements being designed for mechanical attachment to one and the same area part (3) of the housing (1-3), one at the time, selecting one element (11) from the set, and attaching mechanically the selected element (11) to said area part (3) of the housing (1-3).
