

POLY-DONOR CD4⁺ T CELLS EXPRESSING IL-10 AND USES THEREOF

Abstract

The present disclosure provides a population of poly-donor CD4^{IL-10} cells generated by genetically modifying CD4⁺ T cells from at least three different T cell donors. Further provided are methods of generating the poly-donor CD4^{IL-10} cells and methods of using the poly-donor CD4^{IL-10} cells for immune tolerization, treating GvHD, cell and organ transplantation, cancer, and other immune disorders.
