

ABSTRACT

The invention relates to a box fixing structure and a carrier device. The box fixing structure comprises: a box; a restraint strap passing through the box, the restraint strap comprising an adjustment end and at least one connection end, wherein the adjustment end and the at least one connection end extend from a rear side plate of the box to the outside of the box, there is a preset height between the position where the at least one connection end leaves the rear side plate and a bottom plate of the box, and an anchor for connection to a vehicle seat is provided on the at least one connection end; and an adjuster attached to the box, wherein the adjustment end passes through the adjuster and can be locked by the adjuster to adjust the length of the restraint strap between the anchor and the adjuster.
