
The IC card interacts with the mobile equipment through an STK active command to obtain data operation information of a user of the mobile equipment
S201
The IC card determines to execute a corresponding extended STK database command according to the data operation information of the user
S202
When the corresponding extended STK database command is executed, call a corresponding database API function to accomplish operation management on the database
S203
The IC card sends the execution result to the mobile equipment
S204
