(54) Title: HISTORICAL BROWSING SESSION MANAGEMENT

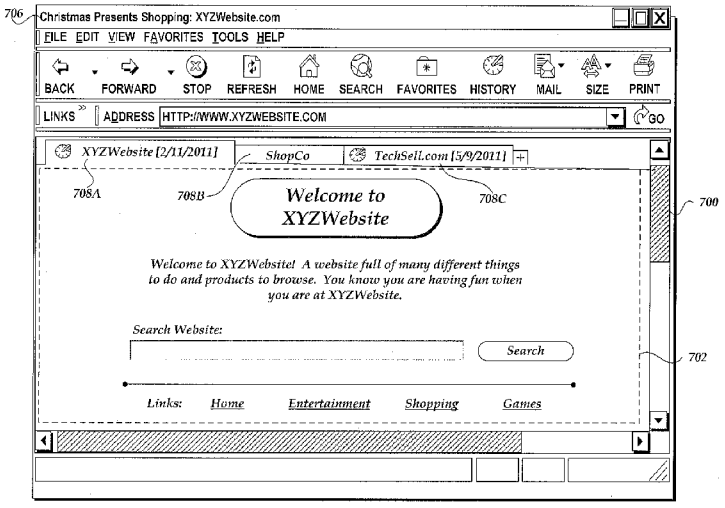

Fig. 7.

(57) Abstract: A remote browsing process is directed to the generation and management of a remote browse session at a network computing provider. A client computing device requests a remote browse session instance at a network computing provider. The browse session instance may correspond to one or more requested network resources. The network computing provider instantiates the browse session instance and retrieves the requested content. The network computing provider processes the requested content and provides a processed representation of the requested content to the client computing device. The network computing provider further provides a historical content representation to a historical browse storage component for storage. The client computing device may display the representation of the requested content and may send user interaction data based on user interactions.
