

ABSTRACT
CEILING FAN

A ceiling fan includes a support rod that is capable of engaging with a
5 ceiling, a motor that is provided at a lower portion of the support rod, blades (5)
that are detachably attached to the motor, and lighting unit (7) that is provided
at a lower portion of the motor. Lighting unit (7) includes upper lighting cover
(16), lower lighting cover (17) that covers an area below upper lighting cover
(16), board (19) which is disposed between lower lighting cover (17) and upper
10 lighting cover (16), and on which a light-emitting component is installed, and
heat-dissipating unit (18) that is provided between board (19) and upper
lighting cover (16), and dissipates heat from board (19). Upper lighting cover
(16) and lower lighting cover (17) are formed of a resin, and opening (31) for
dissipating heat is provided at a center portion of upper lighting cover (16).
