

**CARD EDGE CONNECTOR AND CONNECTOR ASSEMBLY**  
**THEREOF**

**ABSTRACT OF THE DISCLOSURE**

5 A card edge connector comprises an insulation housing and a plurality of terminals. The insulation housing includes a receiving slot for receiving a card module, a plurality of partitions arrayed on opposite sides of the receiving slot and defining a plurality of cavities, each partition including a bottom surface configured to be disposed on a printed circuit board. Each terminal comprises a body portion having a fixing portion  
10 configured to secure the terminal in the respective cavity and an inversely bent section, a solder tail extending from the fixing portion, and a contact portion extending from the inversely bent section and having a distal end at least partially protruding beyond the bottom surface.
