ABSTRACT

TITLE OF INVENTION: ATTENDANCE MANAGEMENT METHOD, ATTENDANCE MANAGEMENT PROGRAM, AND ATTENDANCE MANAGEMENT SYSTEM

An attendance management method according to the present invention comprises: a step in which, at each of a plurality of times a worker starts work during a day, when a computer is operated so as to record the start time or when the computer detects the start of work by the worker, the computer generates a data record for recording the start time and an end time and records the start time in the data record generated; and a step in which, when the computer is operated by the worker to record an end time or detects the end of work by the worker, the computer records the end time in the data record in which the most recent start time is registered, wherein hours worked are calculated from the start times and the end times of the respective spans and are summed so as to calculate the total work amount during the day. The total work amounts are summed as, for example, daily, weekly, monthly, or yearly work amounts and are displayed in the form of a list or a graph. This makes it possible to manage the state of working, normal hours worked, and overtime.
