

ABSTRACT

AN APPARATUS AND METHODS FOR DISPENSING AT LEAST ONE SEGMENT OF A PRINTED MEDIA SHEET WITH A PLURALITY OF 5 SEGMENTS

There is provided an apparatus and a method for dispensing printed labels from a printer. The printed labels may be prepared on a need basis, such that each printed label is either held in the apparatus or ejected from the apparatus. Some
10 advantages of the apparatus and method include prolonging a lifespan for a print head, and minimisation of transition error on a media used for printing.
