

Abstract

The present invention relates to heteroaromatic formamide compounds and the uses thereof in medicine. In particular, the present invention relates to heteroaromatic formamide compounds represented by general formula (I), a preparation method thereof, a pharmaceutical composition containing said compounds, and the use of the same as a therapeutic agent, in particular, the use as a selective inhibitor for plasma kallikrein (PKa) and the use in treating and/or preventing diseases which may benefit from the inhibition of plasma kallikrein, especially the use in treating and/or preventing diabetic macular edema (DME), age-related macular degeneration (AMD), choroidal neovascularization, hereditary angioedema (HAE), cerebral edema after stroke, etc.
