

**APPARATUS AND METHOD FOR PROVIDING NOTIFICATION OF
ALLOCATION OF COMMUNICATION RESOURCES IN A RADIO
COMMUNICATION SYSTEM**

ABSTRACT

Apparatus, and an associated method, for notifying a remote station of a communication resource allocation made to communicate data thereto. The allocation of communication resources is made across a plurality of radio carriers during time frames defined upon each of the carriers. A matrix representation of the resource allocation is made, and the matrix representation is included in an allocation message that is created and sent to the remote station.
