WRITING AND PAYMENT METHOD, APPARATUS AND DEVICE FOR NFC PORTABLE DEVICE

ABSTRACT

Implementations of the present specification disclose a writing method for a near field communication (NFC) portable device, an NFC-portable device-based payment processing method, an apparatus, and a device. The method includes: a server generates a key pair identifier associated with a user account and the key pair corresponding to the key pair identifier in advance, and an NFC writing end writes the key pair identifier and a public key corresponding to the key pair into an NFC portable device. After that, the NFC portable device can pay for an NFC communication between the NFC portable device and a consumption machine, and a server performs a deduction from the user account, where the NFC portable device is, for example, an NFC-enabled wearable device or card.
