Implantable electrode with hollow cylindrical sheath

Abstract

The invention relates to an implantable electrode (1) and a process to produce an implantable electrode (1). To make it possible to produce the implantable electrode (1) in a simple and economical manner, the invention provides that a connection cable (6) of the electrode (1) is at least partly embedded in a sheath (4) of the electrode (1) and the sheath (4) is in the shape of a hollow cylinder.
