

ABSTRACT

POLYPHENYLENE ETHER COMPOSITION

5 The present disclosure provides a polyphenylene ether composition
having a high glass transition temperature and a long-term solubility in a
solvent, and exhibiting a low viscosity when being dissolved in a solvent. The
polyphenylene ether composition of the present disclosure contains 60 mol%
or more of a polyphenylene ether having the structure of Formula (1), wherein
10 the ratio of the integrated value of the peak appearing at 7.6 to 8.3 ppm to the
integrated value of the peak derived from the structure of the following
Formula (2) in a ^1H -NMR measurement result is 1 or less, and the number
average molecular weight in terms of polystyrene is 500 to 15,000 g/mol.
