(54) Title: A WRITING TABLET ASSEMBLY WITH IMPROVED CONNECTIONS

Figure 1

(57) Abstract: A writing tablet assembly for use with a chair comprising a writing tablet; a frame in connection with the writing tablet and the chair; and a swivel joint linking the writing tablet to the frame for enabling the writing tablet to rotate between a storage position to a use position, the swivel joint comprises a first planar surface and a second planar surface at 45° from the first planar surface, each of the first and second planar surfaces has a first and second cylindrical projections protruding from the surfaces to engage with the writing tablet and the frame respectively, characterized in that the first cylindrical projection from the first planar surface has a first indentation formed around the outer perimeter of the first cylindrical projection to engage with a screw that prevents the writing tablet from separating from the swivel joint upon repeating rotational movement of the writing tablet.
