

22 DEC 2003

Figure 1
Induction of protective immunity by ME/D vaccination

Figure 2
Proliferative responses by lymph node cells from mouse immunized subcutaneously with recombinant multi-epitope constructs

3/11

Figure 3

IFN- γ production by lymph node cells from mice immunized subcutaneously with recombinant multi-epitope constructs

Figure 4
Proliferative responses in mice immunized with ME/D by different routes

5/11

Figure 5
IFN- γ responses in mice immunized with ME/D by different routes

7/11

Figure 7
Contribution of single epitopes to IFN- γ production in mice immunized with ME/D by different routes

Figure 8

Titre and subclass of anti-ME antibody
in the serum of mice immunized with ME DNA

Figure 9
IFN- γ production by memory splenocytes of BALB/cByJ mice

Memory splenocytes
Control splenocytes

10/11

Figure 10
IFN- γ production and proliferative responses of human PBMC
after *in vitro* stimulation with rME/A, rME/B and rME/D

IFN- γ and proliferative responses of human PBMC after *in vitro* stimulation with recombinant single epitopes
