USE OF ANTI-AMYLOID BETA ANTIBODY IN OCULAR DISEASES

ABSTRACT

The present invention provides novel methods and compositions comprising highly specific and highly effective antibodies that specifically recognize and bind to specific epitopes from a range of β-amyloid proteins. The antibodies of the present invention are particularly useful for the treatment of ocular diseases associated with pathological abnormalities/changes in the tissues of the visual system, particularly associated with amyloid-beta-related pathological abnormalities/changes in the tissues of the visual system.
