CORD STORAGE DEVICE FOR MOUSE

162162

ABSTRACT

A cord storage device for mouse includes characteristics of an cord extended from a mouse body thereof and winded and stored in large and small storage grooves formed at large and small turning wheels thereof.

- 5 Using the large and small turning wheels that rotate coaxially, inner and outer cords attached in the large and small turning wheels are released or winded at different lengths. Using the structure, the defined inner and outer cords are stored into or released from an interior of a base of a mouse, and the mouse body is combined with the base into one body for
- 10 easy carrying.
