

POWER GENERATOR

ABSTRACT

The purpose of the present invention is to provide an energy-saving power generator for generating a power by rotating a rotary member. A power generator 100 for generating a power by rotating a rotary member 10, comprising: opposing columns 20 (21, 22) for supporting the power generator 100; one or more movable inclined members 40 inclined from one column 21 to other column 22 for rotating the rotary member 10 and capable of ascending and descending along the columns by one or more roller members 30 arranged at opposite ends of the movable inclined members 40 and by roller receiving members 35 provided at the columns 20 (21, 22); and one or more fixed inclined members 60 inclined from the other column 22 to the one column 21 for rotating the rotary member 10 and provided at the columns 20 (21, 22) or at supporting members 50 for supporting the columns.
