

## ABSTRACT

1 An interconnection system, comprising: a first connector  
2 having an arrangement of contacts therein; and a second  
3 connector, mateable with said first connector, and having  
4 an arrangement of contacts therein. The second connector  
5 can mate with the first connector in a plurality of  
6 orientations. An electrical connector, comprising: an  
7 insulative housing; and a plurality of contacts in said  
8 insulative housing. The connector has four quadrants,  
9 with each quadrant housing some of the contacts in an  
10 orientation. Each quadrant has an orientation that is  
11 different than the other quadrants.
