

ABSTRACT

WASHING SYSTEM, LAUNDRY WASHING MACHINE, AND PROGRAM

5

A washing system according to the present disclosure includes: a washing machine (1); a server (30) communicable with the washing machine (1); and a terminal (40) communicable with the server (30) or the washing machine (1). The terminal (40)
10 transmits, to the server (30), setting information about a customized cycle created by user input. The terminal (40) causes different indications to be displayed on a washing machine operation display screen when a cycle preinstalled on the washing machine (1) is to be executed and when the customized cycle is to
15 be executed. This minimizes data transmission and reception required to display a cycle name, allowing a reduction in the amount of data to be stored in a washing machine storage unit (5) at the time of manufacture.
