

Method, Apparatus, and Device for Transferring Virtual Resources Across Domains

ABSTRACT

5 Embodiments of the present specification disclose a method, an apparatus, and a device for transferring virtual resources across domains. The method includes: generating, by a first terminal, first virtual resource information according to virtual resource information provided by a first user, wherein the first virtual resource information at least includes a quantity of to-be-transferred virtual resource, information of the first user, and information of a virtual resource receiving party;
10 submitting the first virtual resource information to a cloud server, causing the cloud server to generate the second virtual resource information according to the first virtual resource information and return the second virtual resource information to the first terminal, wherein the second virtual resource information at least includes the first virtual resource information and an order number; sending the second virtual resource information to a second terminal, so that the second terminal transfers, based
15 on the second virtual resource information, the to-be-transferred virtual resource corresponding to the quantity of the to-be-transferred virtual resource to the virtual resource receiving party.
