Abstract

Data Transmission Method, Terminal Device, and Network Device

Disclosed in embodiments of the present application are a data transmission method, a terminal device, and a network device. The method comprises: a terminal device receive first indication information sent by a network device, the first indication information being used for indicating whether each RB in at least one radio bearer (RB) enables replicated-data transmission function; and the terminal device sends data to the network device according to the first indication information. The method, the terminal device and the network device in the embodiments of the present application help to improve the flexibility of data transmission.
