(54) Title: REFLECTIVE DECORATION ASSEMBLY

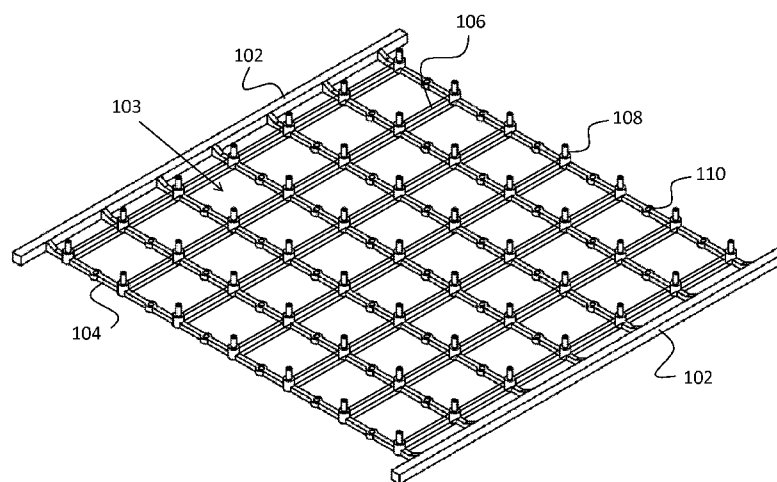

FIG. 1

(57) Abstract: The present invention is an assembly and method for providing a reflective decoration assembly that includes a frame having a pair of opposing frame edges and a plurality of first frame supports, where each frame support is arranged in a plane with at least two other first frame supports, is arranged in a plane defined by the pair of opposing frame edges, has a portion between the pair of opposing frame edges, and is substantially parallel to at least one other first frame support. The reflective decoration assembly also features a plurality of second frame supports, each being arranged in an intersecting configuration with at least two of the first frame supports. Disc attachment posts have a first end attached to the frame and a second end separated from the first end, the second end having a disc retaining head thereat.
