ABSTRACT

A PAIR OF SPECTACLES

A pair of spectacles is disclosed as comprising a frame member and two circular magnetic members, each of which being secured to and wholly within a nose support member. The nose support member is releasably engageable with the frame member by an engagement means comprising the magnetic member. The magnetic flux density of the magnetic member is between 1,200 and 2,300 gauss. When the pair of spectacles is worn by a user, each magnetic member is arranged to be positioned above an acupuncture point on the nose bridge area of the user.
