(54) Title: ACCOUNT REBALANCING DAEMON FOR USE WITH SECURE DIGITAL ASSET CUSTODIANS

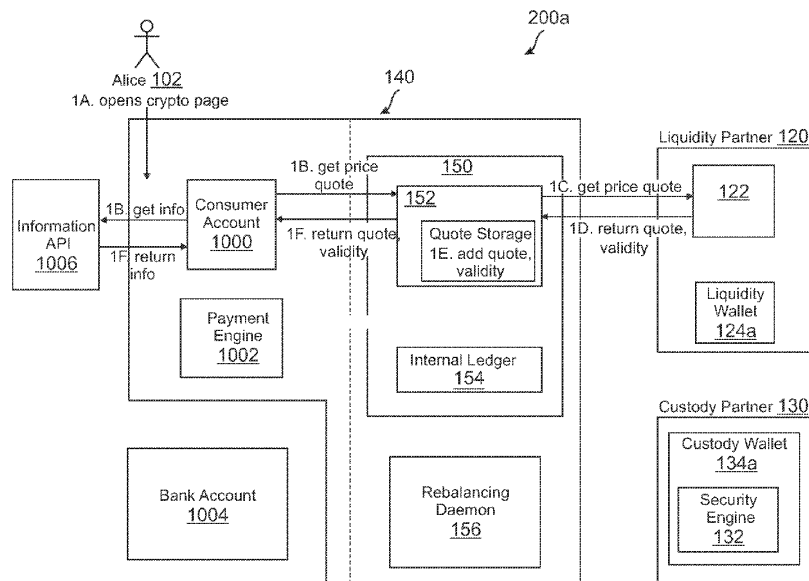

FIG. 2A

(57) Abstract: There are provided systems and methods for an account rebalancing daemon for use with secure digital asset custodians. A service provider server, such as an electronic transaction processor, may provide cryptocurrency functions and operations associated with use of an online digital platform that trades and secures cryptocurrencies. The service provider may have a digital wallet that allows for storage of cryptocurrency on the online platform. However, these digital wallets may be vulnerable to computing exploits that may obtain cryptocurrencies through computing attacks, hacking operations, and the like. Thus, the service provider may provide for an automated daemon application or process that utilizes a secure digital wallet using secure computing hardware and authorizations to maintain a balance between the digital wallets to reduce risk. This daemon may automatically detect balance data and may execute operations to rebalance the digital wallets.
