

RADIOTELEPHONE HAVING A SELF CONTAINED HINGE

5

Abstract Of The Disclosure

10 A radiotelephone (100) has a hinge (301) for joining a body (101) a cover (103) along an axis. The hinge (301) contains the axial force generated by an urging mechanism (403,404,405) by locating the urging mechanism (403,404,405) in a can (303) and attaching a cap (305) to the can (303).
