(54) Title: HERBAL COMPOSITION FOR THE PROPHYLAXIS AND TREATMENT OF AIDS

(57) Abstract

A therapeutic composition for the prophylaxis and treatment of AIDS comprising a mixture of nontoxic herbs of well recognised medicinal properties. The herbal composition consists of Stephania venosa Spreng (40–60 mg), Stephania suberosa Forman (40–60 mg), Stephania glabra Roxb. Miers. (40–60 mg), Hedychium coronarium Roem (40–60 mg), Zingiber Officinalis Roscoe (30–50 mg) and Curcuma Amada (30–50 mg). The process of making the composition requires the herbs to be washed, cut into small pieces, dried and separated from all extraneous material. Each herb is then weighed according to predetermined proportions and pulverised together into a powder of about 40–100 mesh, and dried again. The herbal composition can then be filled into hard gelatin capsules. It has been found that the herbal composition improves the physical condition of AIDS patients and can alleviate or cease the symptoms of most opportunistic infections.
