Abstract

8,8a-Dihydroindeno[1,2-d]thiazole derivatives which are substituted in the 8a-position; processes for their preparation and their use as medicaments

The invention relates to polycyclic dihydrothiazoles and to their physiologically acceptable salts and physiologically functional derivatives.

Compounds of the formula I,

in which the radicals are as defined above, and their physiologically acceptable salts and processes for their preparation are described. The compounds are suitable, for example, as anorectics.
